

# Easily Sending Multiple Pictures

1. Place all of your pictures that you want into one folder.  
(You would possibly want to give the folder a meaningful name just to keep your files orderly)
2. Right mouse click on the folder with the pictures, and got to Send To as shown in the pic below

3. In the next sub-window, select Compressed (zipped) Folder  
This will create one file with the same name as the folder, but you will see it has an icon with a little zipper (see pic below). This is the file you would want to send because now all of your pictures will be in one large file
